

INSTALLING OMNIS FONTS

The Omnis fonts must be “installed”, rather than just copied, into the *Windows* folder in your Windows 95 or 98 computer.

1. Download the fonts onto the desktop or any other temporary location on your computer.
2. Double click on the Font file icon, which you have just downloaded and it will automatically expand the fonts into the temporary location you specified.
3. You will be asked for a password. The Password is “font”.
4. Locate and open the *Fonts* folder, which is inside the *Windows* folder.
5. From the File Menu, select “Install New Font” and go to the temporary location where the new fonts are located and select all. Click OK.
6. The new Fonts will now be installed into the *Fonts* folder.
